Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 04 September 2007.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

DETAILED ACTION

Election/Restrictions

1. Applicant's election without traverse of Species 2 in the reply filed on 04 September 2007 is acknowledged.
2. Claims 1 and 5 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected species, there being no allowable generic or linking claim. Election was made **without** traverse in the reply filed on 04 September 2007.

Priority

3. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

5. Claims 2-4, 6-8 are rejected under 35 U.S.C. 102(a) and/or 102(e) as being anticipated by Hillhouse, U.S. Publication No. 2002/0154793. Referring to claims 2, 6, Hillhouse discloses a biometric authentication system wherein a user's fingerprint biometrics are initially enrolled for storage as a biometric template ([0053] & [0056]), which meets the limitation of a fingerprint registration data section in which pieces of fingerprint data are registered. Subsequently a user

Art Unit: 2132

provides a fingerprint sample for authentication ([0059] & Figure 2), which meets the limitation of a fingerprint read section which reads one fingerprint data. The fingerprint sample is compared against the biometric samples associated with that user that are stored in a database ([0059]-[0060] & Figure 2), which meets the limitation of a fingerprint collation section which inspects whether fingerprint data that matches or almost matches to the fingerprint data read by the fingerprint read section is registered in the fingerprint registration data section. If the sample is a match, a determination is made as to the degree of closeness with which the sample matches, and if the sample is close enough to the other biometric templates, the sample is stored as a subsidiary template along with the other templates in association with the user in the database ([0061]-[0062] & Figure 2), which meets the limitation of a control section which registers the fingerprint data read by the fingerprint read section in the fingerprint registration data section additionally to the fingerprint data that is registered in the fingerprint registration data section and that matches or almost matches to the fingerprint data read by the fingerprint read section if the fingerprint data that matches or almost matches to the fingerprint data read by the fingerprint read section is registered in the fingerprint registration data section.

Referring to claims 3, 7, Hillhouse discloses replacing the fingerprint template with the highest composite comparison metric ([0065]), which meets the limitation of deletion means for deleting the fingerprint data having a general similarity that is highest among the pieces of fingerprint data registered in the fingerprint registration data section. from the fingerprint registration data section.

Referring to claims 4, 8, Hillhouse discloses that a comparison metric is made between all-stored templates ([0069]), which meets the limitation of general similarity calculation means

Art Unit: 2132

for calculating similarities between each of the pieces of fingerprint data registered in the fingerprint registration data section and the fingerprint data other than the each fingerprint data, respectively, and for calculating the general similarity based on the similarities.

Conclusion

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
